Cheminéeraum, Restaurant Hirschen, Kirchdorf, 19.30h

Fuel-Cell Cars and the Future

Aki Tsukada

Everything you always wanted to know, but were afraid to ask!

In this illustrated talk, Aki – a leading scientist at PSI in the development of fuel cells for use in cars – will explain what a fuel cell is, how it works and what the present stage of its development is. He will then outline the advantages and drawbacks of the fuel cell in comparison with other types of electrical propulsion systems.

To demonstrate what has been achieved so far, Aki will show a short video of the PSI-Michelin Hy-Light car, driven by a fuel cell, during the “Challenge Bibendum” in Shanghai in 2004.

This is your opportunity to become informed about the possible design of car you could be driving in the future.

(Organized by Trevor Dury (dury.lib@greenmail.ch))
