## Müsital Rekingen

From 1985 until 1997 Holcim used this quarry for the production of cement at Rekingen. This quarry was closed in 1997 and a renaturation program started. Our club has visited

this site several years ago.

We go there again to see the progress, nature has made in regaining the valley. .

We meet at the parking of the synagogue at Lengnau and drive from there to the starting point of the walk. It's an easy two hour walk.
