BIO-TOMATO CULTURE in HÄMIKON

Situated in the beautiful countryside above the Baldeggersee, Frau Monika Fessler has established a business growing about 80 different sorts of old tomato varieties such as 'Berner Rosen', 'Baselbieter Röteli' and 'Gelbe von Thun'. She will offer us an apéro and then show and explain her production. Of course, we can take the opportunity to buy fresh organic tomatoes afterwards.

The tour will last about one hour.

As the drive there will take up to one hour for those of us furthest away, please register by

Monday, 13th Aug. 2012

and let me know if you require or can offer transport. For those who can start off early, the drive can take you via Muri for an additional sight-seeing opportunity.

Hämikon is only a village so I hope it is no problem to find the parking area which is quite large, gravel covered, about half-way down the main road, next to the school house.
